

DEVICE AND METHOD FOR SECURING TRACHEOSTOMY TUBE

ATTACHMENTS

Abstract of the Disclosure

A retainer is provided comprising a ring configured to fit over a readily available tracheostomy tube and be securable thereto, and further having cooperating straps configured to extend around and secure an auxiliary device coupled to the tracheostomy tube, such as a ventilator tube. The retainer is configured to be selectively and easily attachable to existing tracheostomy tubes to provide a platform for securing an auxiliary device.
